CAREERS IN FOCUS

www.burning-glass.com

INTRODUCTION

A Burning Glass Technologies analysis of shifting workforce credential requirements finds a broad range of occupations where employers are seeking a bachelor's degree for jobs that formerly required less education, even when the actual skills required haven't changed or when this makes the position harder to fill.

This phenomenon of "upcredentialing," where employers seek college graduates for positions that used to require a high school diploma or other sub-baccalaureate training, has been much discussed but rarely quantified.

Burning Glass compared the education levels of workers currently employed in an occupation – a measure of past employer preferences – with the education levels employers are currently demanding for the same occupation. Current demand is measured from job postings and is indicative of the future orientation of each role. We can analyze the extent of upcredentialing by looking at the "credentials gap": the difference between the educational attainment of currently employed workers and the educational attainment employers are demanding for new hires.

INCREASINGLY, EMPLOYERS ARE SEEKING
BACCALAUREATE TALENT FOR WHAT HAVE BEEN
SUB-BACCALAUREATE JOBS

Data on educational credentials currently in demand is drawn from Burning Glass's database of online job postings. Burning Glass gathers millions of job openings daily from more than 40,000 websites and then mines the text of each one to analyze each employer's specific requirements, including location and the particular skills, qualifications, and experience required. Data on the existing workforce's educational credentials comes from the 2011 and 2012 American Community Survey.¹ Occupations included in this analysis are positions that have traditionally been open to a broad range of job seekers, with or without a bachelor's degree. Specifically, we define these as roles where between 25% and 75% of job postings call for a B.A.²

Our analysis finds strong evidence of changes in the American workforce, with notable shifts in the qualifications employers are seeking. Increasingly, employers are seeking baccalaureate talent for what have historically been sub-baccalaureate jobs. Labor analysts have generally pointed to two possible explanations for this degree inflation: either jobs are becoming more complex and require new skills (known as "upskilling"), or employers have become more selective and favor more educated workers. Our analysis suggests both possibilities are at work, depending on the specific occupation.

¹ The 2011 and 2012 ACS data represents most recent data available listing educational attainment by Standard Occupational Code.

² Throughout this report, the abbreviation "B.A." is intended to refer generically to a bachelor's degree, including both Bachelors of Arts and Bachelors of Science degrees, among others.

KEY FINDINGS

- Employers now require bachelor's degrees for a wide range of jobs, but the shift has been dramatic for some of the occupations historically dominated by workers without a college degree. The credential gap can amount to 25 percentage points or more for middle skill jobs in some occupational families, like Office and Administrative and Business and Financial Operations. For example, 65% of postings for Executive Secretaries and Executive Assistants³ now call for a bachelor's degree. Only 19% of those currently employed in these roles have a B.A.
- In some roles, employers prefer bachelor's credentials even when that makes the position harder to fill. For example, Construction Supervisor⁴ positions that require a B.A. take 61 days to fill on average, compared to 28 days for postings that don't require a bachelor's degree.
- In other occupations, such as entry level IT help desk⁵ positions, the skill sets indicated in job postings don't include skills typically taught at the bachelor's level, and there is little difference in skill requirements for jobs requiring a college degree from those that do not. Yet the preference for a bachelor's degree has increased. This suggests that employers may be relying on a B.A. as a broad recruitment filter that may or may not correspond to specific capabilities needed to do the job.
- Jobs resist credential inflation when there are good alternatives for identifying skill proficiency. Many health care and engineering technician jobs, such as Respiratory Therapists⁶, show little sign of upcredentialing. That is likely because those positions are governed by strict licensing or certification standards, well-developed training programs, or by measurable skill standards such that employers do not need to look at a college degree as a proxy for capability.

³ 43-6011: Executive Secretaries and Executive Administrative Assistants. In this report, we will provide federal Standard Occupational Codes for clarity when positions are cited.

⁴ 47-1011: First-Line Supervisors of Construction Trades and Extraction Workers

⁵ 15-1151: Computer User Support Specialists & 15-1152: Computer Network Support Specialists

⁶ 29-1126: Respiratory Therapists

IMPLICATIONS

- One implication of this trend is that many middle-skill career pathways are becoming closed off to those without a bachelor's degree – a group that still comprises nearly two-thirds of the U.S. workforce.⁷ Frequently these positions, such as IT help desk technicians⁸, serve as the first step on the career ladder to better jobs, so job seekers without a bachelor's degree may lose out on future advancement as well as current positions.
- This trend could exacerbate the problems employers face as they seek to replace workers amidst an aging workforce. Some of the occupations with the greatest credentials gap have older-than-average workforces, and will have significant turnover as workers retire. Raising credential requirements will make those employees even harder to replace.
- In many of those occupations with a growing credentials gap, it is worth examining exactly why employers prefer employees with a college education. In some cases, the skills needed in that occupation have objectively increased, as reflected in upgraded skill requirements as workers use advanced technology or apply more sophisticated analysis and judgment in their jobs. However, in many other cases — particularly those where the substance of the work does not appear to be changing or to be different based on whether or not a B.A. is required — employers may be using the bachelor's degree as a rough, rule-of-thumb screening system to recruit better workers. In the latter case, greater alignment between K-12 schools, job training programs, and employers might accomplish the same goal with greater precision.
- Jobs in fields with strong certification or licensure standards, or with discreet, measurable skill requirements seem to resist this trend. This suggests that developing certifications that better reflect industry needs, together with industry acceptance of these alternative credentials, could reduce pressure on job seekers to pursue a bachelor's degree and ensure that middle-skill Americans continue to have opportunities for rewarding careers, while continuing to provide employers with access to the talent they need.⁹

⁷ U.S. Bureau of Labor Statistics, "Educational attainment for workers 25 years and older by detailed occupation," Accessed Aug. 22, 2014; www.bls.gov/emp/ep_table_111.htm

⁸ 15-1151: Computer User Support Specialists & 15-1152: Computer Network Support Specialists

⁹ Middle-skill jobs are usually considered occupations which require some post-secondary education, such as a certification or associate's degree, but not a bachelor's degree or higher.

CREDENTIAL GAP BY MIDDLE SKILLS OCCUPATIONAL FAMILY

Occupational Family (+ Top Titles)	Credentials Gap	%Job Holders with BA+ (Source: American Community Survey)	% Postings Requiring Bachelor's Degree (Source: Burning Glass)	2013 Job Postings in Middle Skills Occupations (Source: Burning Glass)
Management - Production Supervisors - Transportation, Storage, and Distribution Managers	26%	42%	68%	710,652
Office and Administrative Services - Executive Secretaries and Executive Assistants - Insurance Claims Clerks	25%	20%	45%	865,134

RAISING THE BAR FOR MIDDLE SKILL WORKERS

Credentials Gap in Administrative and Clerical Roles

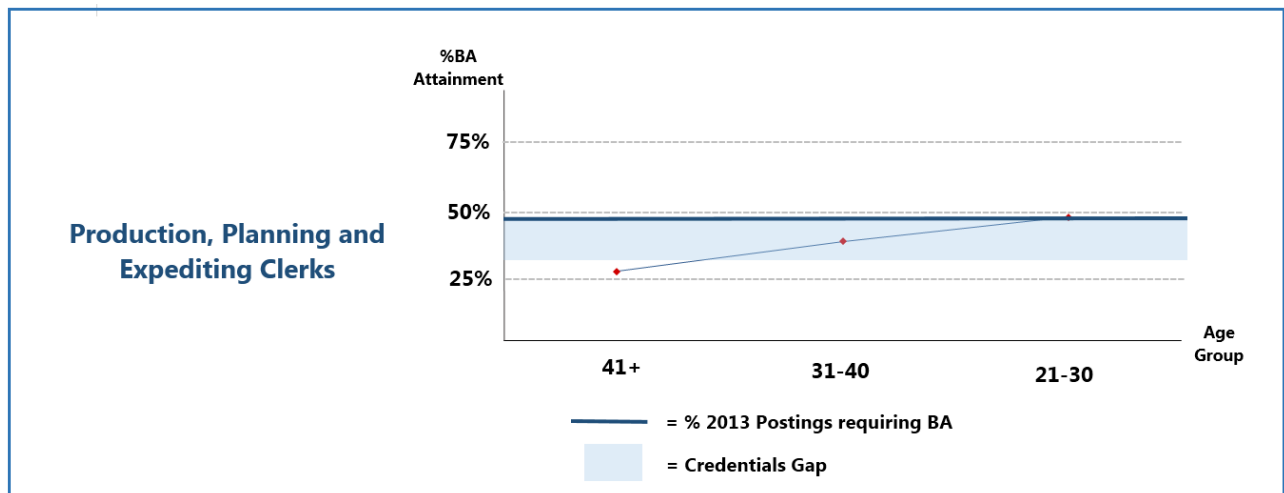

Occupation Title	Credentials Gap	% Job Holders with BA+ (Source: American Community Survey)	% Postings Requiring Bachelor's Degree (Source: Burning Glass)	2013 Job Postings (Source: Burning Glass)
Executive Secretaries and Executive Assistants	46%	19%	65%	65,046
Credit Authorizers, Checkers and Clerks	40%	26%	66%	2,466
Insurance Claims and Policy Processing Clerks	24%	25%	49%	16,833
Production, Planning and Expediting Clerks	16%	32%	48%	70,102

For generations, certain occupational families have served as a career paths for the high school graduate. Administrative Assistants, Executive Secretaries,¹⁰ and clerks of all kinds are unlikely to have a bachelor's degree – yet they these jobs now face some of the largest credential gaps of any occupation. For example, half of postings for Insurance Claims Clerks¹¹ call for a bachelor's degree, but only a quarter of workers employed in the field have that degree. Similarly, there is a 16 percentage point credential gap between the current workforce and recent employer demand for Production Clerks. For Executive Secretaries and Executive Assistants¹⁰, the gap amounts to a staggering 46 percentage points. This reflects a shifting preference by employers for bachelor's-level talent among many support roles.

The preference for college graduates in clerical positions appears to have been growing over the last several decades. For example, Insurance Claims Clerks and Production Clerks in their forties, who likely entered the occupations decades ago, are only 60% as likely to have a bachelor's degree as newer entrants who are still in their twenties. For Insurance Claims Clerks, the credential gap between the existing workforce and what employers are requesting is widening even further, with recent job posting activity requesting a higher level of educational attainment than is held even by their youngest workers. However, the upcredentialing trend in many other occupations has begun to level off. In the case of Production Clerks, supply appears to be meeting demand, as the credential gap has been eliminated among workers aged 21 to 30. The 48% of workers in that age group with a bachelor's degree matches exactly the 48% of postings that call for a B.A.

¹⁰ 43-6011: Executive Secretaries and Executive Administrative Assistants

¹¹ 43-9041: Insurance Claims Clerks

Management career paths are also closing off for those without a bachelor’s degree, particularly among those who supervise skilled-trade workers. Employers hiring Construction Supervisors¹² and Production and Operating Supervisors¹³ are requesting candidates with greater academic pedigrees than those held by current workers. In addition to bachelor’s credentials, these management roles commonly request managerial skills such as employee training proficiencies, manufacturing process skills such as Six Sigma, as well as knowledge of SAP and other sophisticated software packages.

The phenomenon of upcredentialing is particularly strong in the Human Resources occupations and related roles that manage the talent pool. Across entry-level Human Resource roles, employers are experiencing an average credential gap of 24 percentage points. In an increasingly competitive talent marketplace, employers appear to be putting more emphasis on filling HR departments with talent to recruit and develop their workforce. It is also possible that the upcredentialing of Human Resource positions could itself be contributing to the credential gap in other occupations if higher-credentialed recruiters are displaying an affinity for similarly qualified talent.

¹² 47-1011: First-Line Supervisors of Construction Trades and Extraction Workers

¹³ 51-1011: First-Line Supervisors of Production and Operating Workers

Credentials Gap in Management and Supervisory Roles

Occupation Title	Credentials Gap	%Job Holders with BA+ (Source: American Community Survey)	% Postings Requiring Bachelor's Degree (Source: Burning Glass)	2013 Job Postings (Source: Burning Glass)
First-Line Supervisors of Production and Operating Workers	45%	17%	62%	72,117
Transportation, Storage and Distribution Managers	42%	32%	74%	23,515
First-Line Supervisors of Mechanics, Installers, and Repairers	34%	14%	48%	49,097
First-Line Supervisors of Construction Trades and Extraction Workers	21%	12%	33%	19,411

Credentials Gap in Human Resources Roles

Occupation Title	Credentials Gap	%Job Holders with BA+ (Source: American Community Survey)	%Real Time Postings Requiring Bachelor's Degree (Source: Burning Glass)	2013 Job Postings in Middle Skills Occupation (Source: Burning Glass)
Training and Development Specialists	25%	50%	75%	54,605
Human Resources Assistants, Except Payroll and Timekeeping	22%	29%	51%	28,337

EMPLOYERS FAVOR COLLEGE GRADUATES, EVEN WHEN IT MAKES HIRING DIFFICULT

A preference for college graduates does have other implications for an employer. One is that this may make positions harder to fill. For example, Mechanic, Installation, and Repair Supervisor¹⁴ positions that require a bachelor's take almost 20% longer to fill than those that don't (37.5 days compared to 32 days). The gap for Construction Supervisors is even greater, with bachelor's degree openings taking 61 days to fill compared to only 28 days for non-B.A. positions. A similar pattern is developing with Office and Administrative positions, with postings requiring a college degree taking substantially longer to fill than those that do not.

Average Time to Fill Job Postings¹⁵

Occupational Title	Credentials Gap	Average # of Days to Fill Postings That Do Not Require a BA (Burning Glass)	Average # of Days to Fill Postings That Require a BA (Burning Glass)	% Change
Executive Secretaries and Executive Assistants	46%	24.85	27.96	13%
Transportation, Storage and Distribution Managers	42%	31.42	33.35	6%
First-Line Supervisors of Mechanics, Installers, and Repairers	34%	31.92	37.49	17%
Training and Development Specialists	25%	34.98	36.64	5%
Insurance Claims and Policy Processing Clerks	24%	24.08	27.93	16%
Human Resources Assistants, Except Payroll and Timekeeping	22%	21.65	24.02	11%
First-Line Supervisors of Construction Trades and Extraction Workers	21%	28.28	61.31	117%
Computer User Support Specialists (Helpdesk)	21%	27.14	37.88	40%
Production, Planning and Expediting Clerks	16%	25.83	31.08	20%

¹⁴ 49-1011: First-Line Supervisors of Mechanics, Installers, and Repairers

¹⁵ Statistics on the time required to fill various jobs is computed as the number of days they remain posted.

The good news for workers (or bad news for employers, depending on your point of view) is that this shift is raising salaries in these occupations. Office and Administrative positions have seen tremendous salary growth, according to the Bureau of Labor Statistics. Executive Secretaries and Executive Administrative Assistants¹⁶ have seen a 41% raise in salaries since 2004, compared to the 24% national average over the period.

THE GOOD NEWS FOR WORKERS (OR BAD NEWS FOR EMPLOYERS) IS THAT THIS SHIFT IS RAISING SALARIES

Employers' desire for a bachelor's degree can vary depending on the business sector involved, even for similar positions. The higher education sector is more likely than other industries to require a bachelor's degree for Executive Secretaries and Executive Assistants¹⁶, and so is the financial sector. By contrast, Hospitals and Public Sector employers continue to be centers of sub-B.A. opportunity. However, in many cases, the sectors that have been experiencing the greatest job growth are those that are more likely to require a bachelor's degree for equivalent positions. For example, while the Bureau of Labor Statistics projects high job growth for Financial Services industries, Public Sector and Governmental positions are projected to decline – thereby shifting the balance away from sub-B.A. opportunity in Office and Administrative Support roles.

It is important to note that, analysis of the skill requirements of Office and Administrative Support job postings shows little difference between those at the bachelor's and sub-baccalaureate levels, or between those in various sectors (e.g. financial services vs. public sector). This suggests that, for these jobs, degree inflation may not reflect any change in the role itself. Rather, private-sector industries appear to be using college credentials as a proxy for higher-caliber workers — and have the money to pay accordingly.

¹⁶ 43-6011: Executive Secretaries and Executive Administrative Assistants

THIS TREND WILL EXACERBATE THE PROBLEM OF REPLACING AGING WORKFORCES

While rising demand for better-educated workers is already rendering many positions harder to fill, this problem is likely to become worse over time as higher qualification requirements compound the challenges presented by long-term demographic trends. That's because, in many of these occupations, the current workforce is older than average, and will need to be replaced as workers retire. Yet the desire for better-educated workers may make it more difficult to fill those positions.

Credentials Gap and Average Age of Select Occupations

Occupational Title	Credentials Gap	2012 Median Age (BLS)	Number of Years Above National Workforce Median Age
Executive Secretaries and Executive Assistants	46%	48.5	6.2
First-Line Supervisors of Production and Operating Workers	45%	48	5.7
First-Line Supervisors of Mechanics, Installers, and Repairers	34%	47.7	5.4
First-Line Supervisors of Office and Administrative Support Workers	29%	45.3	3
Surveying and Mapping Technicians	25%	45	2.7
Training and Development Specialists	25%	43.8	1.5
First-Line Supervisors of Construction Trades and Extraction Workers	21%	47.8	5.5
All Engineering Technicians	21%	46.8	4.5
Production, Planning and Expediting Clerks	16%	44.1	1.8

Many of the Production and Operating supervisor¹⁷ roles are prime examples. These positions have an older workforce, with a median age of 48, compared to 42 for the entire U.S. workforce. Construction Supervisors¹⁸ and Production and Operating Supervisors¹⁷ are typically promoted from line construction and production roles.¹⁹ However, few of these skilled trade workers, such as Construction Workers, Construction/Building

¹⁷ 51-1011: First-Line Supervisors of Production and Operating Workers

¹⁸ 47-1011: First-Line Supervisors of Construction Trades and Extraction Workers

¹⁹ Based on analysis of resumes in the Burning Glass proprietary database

Inspectors, and Chemical Operators, hold bachelor's degrees. The current talent pipeline is unlikely to be able to fill the demand.

The Office and Administrative Support and Business and Financial occupational families — both of which have experienced a significant credential gap — also have a higher-than-average proportion of older workers (a median age of 48.5 for Executive Secretaries and Executive Assistants), so they may also face problems replacing workers as they retire.

IN SOME JOBS, HIGHER CREDENTIAL REQUIREMENTS REFLECT MORE SKILLED WORK...

Credentials Gap in Drafting Roles

Occupation Title	Credentials Gap	%Job Holders with BA+ (Source: American Community Survey)	%Real Time Postings Requiring Bachelor's Degree (Source: Burning Glass)	2013 Job Postings in Middle Skills Occupation (Source: Burning Glass)
Electrical and Electronics Drafters	21%	27%	48%	5,026
Architectural and Civil Drafters	14%	27%	41%	4,112
Mechanical Drafters	12%	27%	39%	16,636

Some occupations are in fact becoming more complex, and that can be seen in the evolution of job requirements.

For example, employers are increasingly demanding that Drafters, an occupation traditionally open to those without a B.A., possess bachelor's-level credentials. Depending on the specific role, the credential gap for Drafters can be anywhere from 12 to 21 percentage points.

This change seems largely driven by technology. As computer-assisted design and other architectural software make the drafting process more efficient, employers are looking for Drafters to bring additional skills and expertise to the workplace. This includes expertise in fields like purchasing, as Drafters are moving into a more integrated role assisting in design structure during product development and therefore coordinating bills of material with purchasing departments. In effect, as technology reshapes their craft, Drafters are becoming more like junior engineers.

This is another area where a credentials gap also results in higher salaries for those who actually have a bachelor's degree. Salaries for Drafters have converged with engineering salaries over the last decade. Salaries for Electrical and Electronic Drafters²⁰ have grown 29% since 2004 while salaries for Mechanical Engineers have grown 25.5%. Further, Architectural and Civil Drafter²¹ salaries have grown 26% since 2004, while salaries for Architects themselves have only seen 20% growth.

The continued evolution of the Engineering occupations is further reflected by a rise in employment for all Engineers compared to a decline in Drafting and Technician roles. In 2000, there were approximately 1.5 Engineers for every Drafter and Technician. By May 2013 that ratio had increased to 2.4 Engineers for every

²⁰ 17-3012: Electrical and Electronic Drafters

²¹ 17-3011: Architectural and Civil Drafters

Drafter and Technician²². Not only are Engineering support occupations becoming more advanced, but many prospective Drafters and Technicians are foregoing this step and vying to become Engineers.

In other occupations as well, there is a clear distinction between the skill requirements of those postings that ask for a bachelor's degree and those that don't, suggesting that employers' growing preference for higher credentials may be a reflection of their need for more advanced skills. This is particularly true in financial occupations. Postings for Loan Officers²³ that require college graduates, for example, are more likely to ask for national accreditations and specific commercial and retail lending skills than other postings.

²² 2000 & 2013 Bureau of Labor Statistics Occupational Employment Statistics

²³ 13-2072: Loan Officers

...BUT IN MANY OTHER CASES IT'S STILL THE SAME JOB

Credentials Gap in Help Desk Roles

Occupation Title	Credentials Gap	%Job Holders with BA+ (Source: American Community Survey)	% Postings Requiring Bachelor's Degree (Source: Burning Glass)	2013 Job Postings (Source: Burning Glass)
Computer Network Support Specialists	31%	39%	70%	11,675
Computer User Support Specialists	21%	39%	60%	201,332

While in some occupations the rising demand for college graduates reflects employers' need for more advanced skill sets, in many other occupations the substance of jobs at the B.A. and sub-B.A. levels seems little different. For example, there has been a striking rise in demand for bachelor's degrees in IT help desk positions, historically a first step on the IT career ladder – and an important entry to technology careers for those without a college degree. Our analysis finds a 21% credential gap for Computer User Support Specialists²⁴, with only 39% of current job holders possessing a B.A., but 60% of new job postings requesting a degree. Yet when we examine the postings, the specific skills advertised for help desk roles with and without a B.A. are identical.

This strongly suggests that, in such occupations, employers have come to rely on a bachelor's degree primarily as a means of screening applicants, in a way that may not be related to job duties themselves – even though this preference for college graduates also makes these jobs substantially harder to fill. Help desk jobs calling for a bachelor's degree take 35% longer to fill on average than those that do not. The skills needed for these roles include hardware and software configuration, VPN and computer repair, knowledge sets which can typically be learned in one-to-two year training programs. In fact, these skills are rarely taught in four-year bachelor's degree programs, so applicants with college degrees may in fact be less directly qualified than their sub-B.A. peers.

When credential requirements align more clearly with skills, gaps in posting duration (a measure of how hard a job is to fill) narrow considerably. For example, among those computer support roles that require programming skills such as SQL and Java, which are often taught in B.A. computer science programs but less often in sub-B.A. programs of study, postings requesting a B.A. are open an average of 41 days compared to 36 days for sub-B.A. postings. For Network Support Specialists²⁵, it actually takes two days longer to fill a non-bachelor's opening.

²⁴ 15-1151: Computer User Support Specialists

²⁵ 15-1152: Computer Network Support Specialists

There is considerable anecdotal evidence that many administrative, clerical, and human resources positions have become more demanding because workers have to deal with new technologies. However, the skills requested in job postings for those positions are similar whether they ask for a bachelor's degree or not. The degrees held by the existing workforce in these occupations are spread out over the educational spectrum (only one-third of the Insurance Clerks²⁶ have a bachelor's degree; only 8 percent of all workers have a business degree, for example).²⁷ This is additional evidence that employers are using the bachelor's degree as a proxy for higher-level skills. It isn't so much that college graduates bring a new skill set that employers can't find elsewhere; it's that employers seem to presume that a college graduate will be more capable at the needed skill set than those without a degree.

²⁶ 43-9041: Insurance Claims and Policy Processing Clerks

²⁷ U.S. Census Bureau, American Community Survey, accessed via IPUMS-USA, <https://usa.ipums.org/usa/>

SOME POSITIONS RESIST THE TREND

Some professions, while not exactly immune, show little or no signs of upcredentialing. Degree requirements for health care technicians, for example, reflect little evidence of a credential gap. What these positions have in common are strong credential requirements that exist outside the traditional higher education degree structure: state licensing requirements, certifications accepted industrywide, or specific measurable skills. A radiology technician, for example, needs to have specific certifications. Employers have specific criteria to use as a yardstick when hiring, so there's not as much incentive to apply the less-specific screen of a bachelor's degree.

One notable exception in health care involves registered nurses²⁸, who account for half of all demand in occupations open to sub-B.A. job seekers. Yet, these roles too have been dramatically upcredentialing over the last several years. Some 64% of nurses under 30 years old hold a bachelor's degree compared with 51% of their colleagues older than age 40. This upcredentialing trend is particularly pronounced in hospital settings, where nursing roles tend to be more complex and technically sophisticated. While we do not currently see evidence of a credential gap for R.N.'s in national data, opportunities for job seekers without bachelor's degree are increasingly concentrated in less desirable, lower-paying roles in skilled nursing facilities and clinics vs. in hospitals where nursing roles tend to involve more technically sophisticated work and provide greater opportunity for upward career mobility. 🏠

ABOUT BURNING GLASS

Burning Glass's tools and data are playing a growing role in informing the global conversation on education and the workforce by providing researchers, policy makers, educators, and employers with detailed real-time awareness into skill gaps and labor market demand. Burning Glass's job seeker applications power several government workforce systems and have been shown to have substantive impact on reemployment outcomes and on labor market literacy.

With headquarters in Boston's historic Faneuil Hall, Burning Glass is proud to serve a client base that spans six continents, including education institutions, government workforce agencies, academic research centers, global recruitment and staffing agencies, major employers, and leading job boards. Visit us at www.burning-glass.com.
